Profiling Quick Start Guide

For Building Standards Profiles on DISRonline

This guide provides some preparatory steps for building profiles on DISRonline and to make your interaction with DISRonline easier and more productive.

Introduction

- A System Profile consists of one or more Information Technology (IT) Profiles. It is advisable to break the System Profile into smaller functional, or subsystem, pieces. These individual IT profiles will be grouped together as a System Profile.

Example:

Jet Fighter Aircraft (System Profile)
◊ Communications (Information Technology (IT) Profile)
◊ Landing Gear (IT Profile)
◊ Navigation (IT Profile)
◊ Other subsystem (Other IT Profile)

- You will be required to enter your JCPAT-E System Profile information if you have not already registered your system in JCPAT-E and want to do so.

General Information

- Print out the User's Guide. This is available from the User's Guide link on the DISRonline homepage.
- While building your System Profile, the following information is helpful:
 - ◊ Technical View (on-screen)
 - ◊ Printer Friendly (paper)
 - ◊ Downloading a ".csv" file for use in Microsoft Excel
 - ◊ PDF format (after you "save" your profile)

Building a Profile

- Print out the current DISRonline questionnaire. This is available from the Questionnaire link on the DISRonline homepage.
- Review the questionnaire offline.
 - ◊ Identify the DISR Services that apply to your system.
 - ◊ Answer "Yes" to a question when in doubt. The resulting IT Profile can easily be modified, and standards can be added or deleted as necessary.

Question	Standards Associated with Question
Support Applications Services	
Television Technology	
Does your system digitally encode standard-definition TV for studio distribution?	ITU-R BT.601-4
Does your system use 525-line time annotation or Embedded Time References?	ANSI/SMPTE 12M
Does your system transmit date and time zone information?	ANSI/SMPTE 309M:1998
Does your system contain a serial digital interface interconnection and processing?	ANSI/SMPTE 259M
Does your system include high-definition baseband signal transport and processing?	ANSI/SMPTE 292M
Does your system include a progressive video sampling structure (standard-definition)?	ANSI/SMPTE 293M
Does your system include a 720-line sampling structure (high-definition)?	ANSI/SMPTE 296M
Does your system include a 1080-line video sampling structure (high-definition)?	ANSI/SMPTE 274M
Does your system include serial digital fiber for uncompressed baseband signal transport and processing?	ANSI/SMPTE 297M
Does your system include the use of an ancillary data space formatting structure?	ANSI/SMPTE 291M
Will your system support HDTV sample structure, representation, and interface?	MISB 0001-720P
Is your system an advanced television application?	ATSC A/52 (Audio)
Is your system part of the Weapon Systems domain?	ATSC Doc A/53
Is your system part of the Ground Vehicle or Soldier Systems subdomain?	EIA 170, ANSI/SMPTE 170
Is your system part of the Ground Vehicle subdomain?	EIA 330, EIA 343-A
Does your system exchange data in binary floating-point format?	ANSI/IEEE 754

Profiling Methods

A **System Profile**, is a collection of one or more **Information Technology (IT) Profiles**. Each IT Profile contains one or more standards from the DISR. Building a System Profile is an iterative process; most systems will contain more than one IT Profile. IT Profiles can be built by using any of the five profile building methods listed below. System engineers will often use several of these methods to construct their System Profiles. For initial help see the [profiling quick start guide](#).

1. [Generic Profile Method](#) – Use to include a previously defined and approved Generic Profile in a System Profile, or to copy a Generic Profile into an editable IT Profile.
2. [Questionnaire Method](#) – Answer a set of questions resulting in a list of standards for the DISR Service you select.
3. [DISR Service Method](#) – Select a DISR Service from a dropdown list, view the citations for standards in that DISR Service, and choose the ones you want to add to your IT Profile.
4. [View / Modify](#) – Provides a list of System Profiles, from which you can view subordinate IT Profiles. Standards can then be added or deleted from these IT Profiles.
5. [Search](#)
 - a. Identifies standards for possible inclusion in an IT Profile by searching the JTA document/*Standards Table* for search strings or keywords that meet user-supplied criteria.
 - b. Provides access to JTA document sections through the Table of Contents, allowing a visual search for desired standards in the actual document text.

Profiling Questionnaire

Shown below is the description of the DISR Service that you have selected for building an IT Profile. If you are not satisfied by your selection, click on "Back" to return to the previous page.

By clicking on "Next," you will be asked a series of questions related to this DISR Service. The answers you provide will determine the standards that are included. Once you have answered all of the questions, you will be asked to save the resulting Information Technology (IT) Profile

DISR Service Description:

Military messaging services, including the capability to send, receive, forward, display, retrieve, prioritize, and manage predefined and unformatted military messages are included in this service area. Military messages should use standard data-interchange formats and may include any combination of data, text, audio, graphics, and images. This includes the capability to review and authenticate messages. Incoming message processing services include receipt, validation, distribution, and dissemination of incoming unformatted messages based on message profiling, message precedence, and system-security restrictions. User support applications include the selection and display of messages from a message queue, online management of search profiles, search and retrieval of stored messages based on message content comparison to queries formulated by the analysts, and composition of record messages for transmission. Outgoing message-processing services include coordination by the command's staff organizations, authorized release, and verification of record messages prior to transmission.

Profiling

**Profiling Questionnaire for DISR Service: Military Messaging**

Does your system require the exchange of Tactical Digital Link (TADIL) bit-oriented messages?

Answer: yes

Does your system exchange TADIL-J (Link 16) messages or communicate with JTIDS/MIDS radio?

Answer: yes

Is your WS Missile Defense system required to exchange TADIL-J information over long haul media?

Answer: yes

Does your system require Variable Message Format (VMF) data exchange?

Answer: yes

Do you exchange TADIL messages in a NATO environment?

Answer: yes

Does your system require the exchange of US Message Text Format (USMTF) character-based messages?

Answer: yes

Does your system use the Sensor Link Protocol (SLP) message set to implement a common digital data exchange mechanism?

Answer: yes

Does your C4ISR NCC system process EAMS?

Answer: yes

Is your system used for transferring (though not processing) binary floating-point data?

Answer: yes

- JTA Web Site

Search Tool

The Search Tool provides three ways of searching [DISRonline](#). Each allows you to view further information about the cited standards and, if you have profiling privileges, to add them to your profiles.

- The [Document Search](#) allows the user to search for a text string in the JTA document, returning a list of sections where the string was found. Sections are displayed on a split screen, with the document text in the top half, and a list of standard citations in the bottom half.
- The [Standards Search](#) allows the user to search the DISR standards database for information not contained in the JTA document. Keyword searching has been built into the Standards Search. A list of standards that meet the search criteria is returned.
- The [Table of Contents Search](#) allows the user to displays the JTA's Table of Contents, and view individual sections of the JTA document. The user can then visually search for individual standards.

Enter your search string in the appropriate box and click "Go."

1. [Document Search](#): Enter your search string in the text box; select the JTA version to search; click "Go" to initiate your search. [Wildcards](#) are allowed in the search string.

Search

2. [Standards Search](#): Select the fields you want searched; indicate the status of standards you want returned; enter your search string in the text box; select the JTA version to search; click "Go" to initiate your search. To conduct a keyword search, deselect all the Search Field check boxes and enter the keyword in the text box. [Wildcards](#) are only allowed when conducting a string search.

Search Fields: ☐ Standard ID ☒ Title ☒ Abstract ☐ Guidance

Standard Status: ☒ Mandated ☐ Emerging ☐ Sunset ☐ Preferred

Search

3. [Table of Contents](#): This displays the JTA's Table of Contents, and allows the user to view individual sections of the JTA document. The user can then visually search individual sections for standards.

WS.MUS.4.2.1.1(a) Mandated.

The following industrial bus standard is mandated for applications requiring high-speed data transfer, rugged construction, excellent shock and vibration resistance, **Plug'n Play** capability, and the desire for future hot-swappable support.

* PCI Industrial Computer Manufacturers Group (PICMG): Compact PCI Specification, R2.1, September 1997.

The following standard is mandated for applications that require an efficient peer-to-peer I/O bus capable of handling up to 16 devices, including one or more hosts. This standard includes command sets for magnetic and optical disks, tapes, printers, processors, CD-ROMs, scanners, medium changers, and communications devices.

* ANSI X3.131, Information Systems - Small Computer Systems Interface - 2 (SCSI-2), 1994.

About This Standard**Standard Identifier:** cPCI r2.1**Title of Standard:** PCI Industrial Computer Manufacturer's Group (PICMG):
Compact PCI Specification, R2.1, September 1997.**Standards History:****Current Status:** Mandated**Mandated:** Nov 15, 1999**Emerging:** May 26, 1998**Available:** May 26, 1998**Last Status Review:** Oct 3, 2003**Last Status Update:** Nov 15, 1999**Standards Body:****Domain:** Weapon Systems**DISR Service:** Backplanes and Busses**Standard Abstract:**

CompactPCI is an adaptation of the Peripheral Component Interconnect (PCI) Specification for industrial and/or embedded applications requiring a more robust mechanical form factor than desktop PCI. CompactPCI uses industry standard mechanical components and high performance connector technologies to provide an optimized system intended for rugged applications. CompactPCI provides a system that is electrically compatible with the PCI Specification, allowing low cost PCI components to be utilized in a mechanical form factor suited for rugged environments. CompactPCI is an open specification supported by the PICMG (PCI Industrial Computer Manufacturers Group), which is a consortium of companies involved in utilizing PCI for embedded applications. PICMG controls this specification.

Relevant Information: Also cited in WS.MS.3.5.3 as Emerging and
WS.MUS.3.5.2 as mandated.**Implementation Guidance:** None

InspeQtor Prototype

InspeQtor is a web-based tool for capturing, manipulating, and analyzing information technology (IT) system characteristics in context with any x-y coordinate-based reference model (e.g., LISI Capabilities Model, DII COE Runtime Environment Compliance Levels, ISO-OSI Protocol Stacks).

InspeQtor receives inputs via a system survey questionnaire. Users register system characteristics by selecting (clicking) the appropriate responses to the questions. Answers are stored in a table from which data can be used to create a set of reports. Users can create new questions via an administrative tool built to operate within a standard web-browser.

InspeQtor generates reports that reflect the information captured in the surveys. Reports are available to describe single systems and support comparisons between multiple systems. These products can be based on any of the user-defined x-y coordinate-based reference models included within the tool.

For example, LISI-oriented reports currently available include; Generic Interoperability Profiles (one system), Specific Interoperability Profiles (intersection of two systems), Composite System Interoperability Profiles (intersection of three+ systems), System Interface Matrices, System Input/Output Tables, Interoperability Assessment Matrices, and Interoperability Comparison Reports.

Notice

OPERATIONAL: Individuals interested in using InspeQtor to perform interoperability assessments must [request an account](#) from the InspeQtor Administrator.
